Quick information for our customers

## Curtainsider floor group: No more cut-outs!

**AluTeam curtainsider kits** save cost-intensive working time. As a vehicle manufacturer, you **reduce costs** and produce **more vehicles in the same time** with your employees. Furthermore this helps you to solve personnel bottlenecks.

The **preassembled floor assembly** is the basis of the kit. It consists of the substructure with inserted floor panels. These have either the classic screen printing, aluminium barley grain, aluminium longitudinal grooves or GRP anti-slip surfaces.

The **cross beams** (spacing can be selected) and the **outer frame** are already connected to the floor panels. For load securing the outer frame is either perforated or has recessed lashing brackets in accordance with DIN 12640.

Door stops or an access ladder are already fitted on request. The **hot-dip galvanised longitudinal beams** (previously 120 mm high) are supplied loose.

Unfortunately, it happens again and again that attachments such as filler necks or fender are in the way. Until now, you were then forced to notch the substructure and/or move the cross member.

You can now avoid this work. With the choice of **side members - optionally in 120, 140 or 160 mm height** - you create a curtainsider **optimally adapted to the chassis with minimal effort!**
