## Rear frames on series 180-2: According to your needs!

The **curtainsider kits from AluTeam** offer you as a vehicle builder many options with regard to the design of the rear. Of course, you can also order the kits with just a rear frame for your individual equipment.

In addition, you can use the integral doors proven in the 14x-x series. These light and stable **FerroFoam® doors** are of course **certified with regard to load securing**. The uniform gap dimension ensures a calm appearance. Warping at mitred corners is impossible. Four-leaf doors can also be used instead of the two-leaf doors. These are available with one lock per leaf.

Last but not least, you also have the option of ordering the **kit with insert slats** in various designs as well as with a **dropline** including a groove for the tarpaulin.

*For tail lifts, you can get the top flaps with integrated seal that have been tried and tested in the case kits.*

*In the case of a **fixed roof**, they are attached to the door frame; in the case of a **sliding roof**, they take the form of a sliding flap.*
