

Rapid information for our customer.

Drop sides for the BR 180-2: Strong and light !

The 180-2 curtainsider kits offer a wide range of options. They are also available with matching 600 mm high aluminium dropsides with or without tarpaulin beading. So **you can create a ready-to-use vehicle for your customers in no time at all.**

We manufacture and supply the drop sides to your specification **in all standard RAL colours**. The **strong profiles can withstand heavy loads**. They can be used with one pair of centre stanchions in conjunctions for loads up to 13 tonnes and up to 18 tonnes with two pairs of stakes.

A **certificate in accordance with DIN EN 12642 XL** is available on request. This also applies to the optional rear dropside.

The **high quality long-travel locks** and hinges ensure that the curtain-sider bodies are easy to use in practice. The number of hinges can be selected according to the concept.

In general, our curtainsider kits include a wide range of options, such as pre-assembled door holders, etc., which will save you time during the assembly process.

For this reason, a **pre-mounted galvanised folding step** has recently been added as an option to the dropsides.
